# my touch-typing progression journey
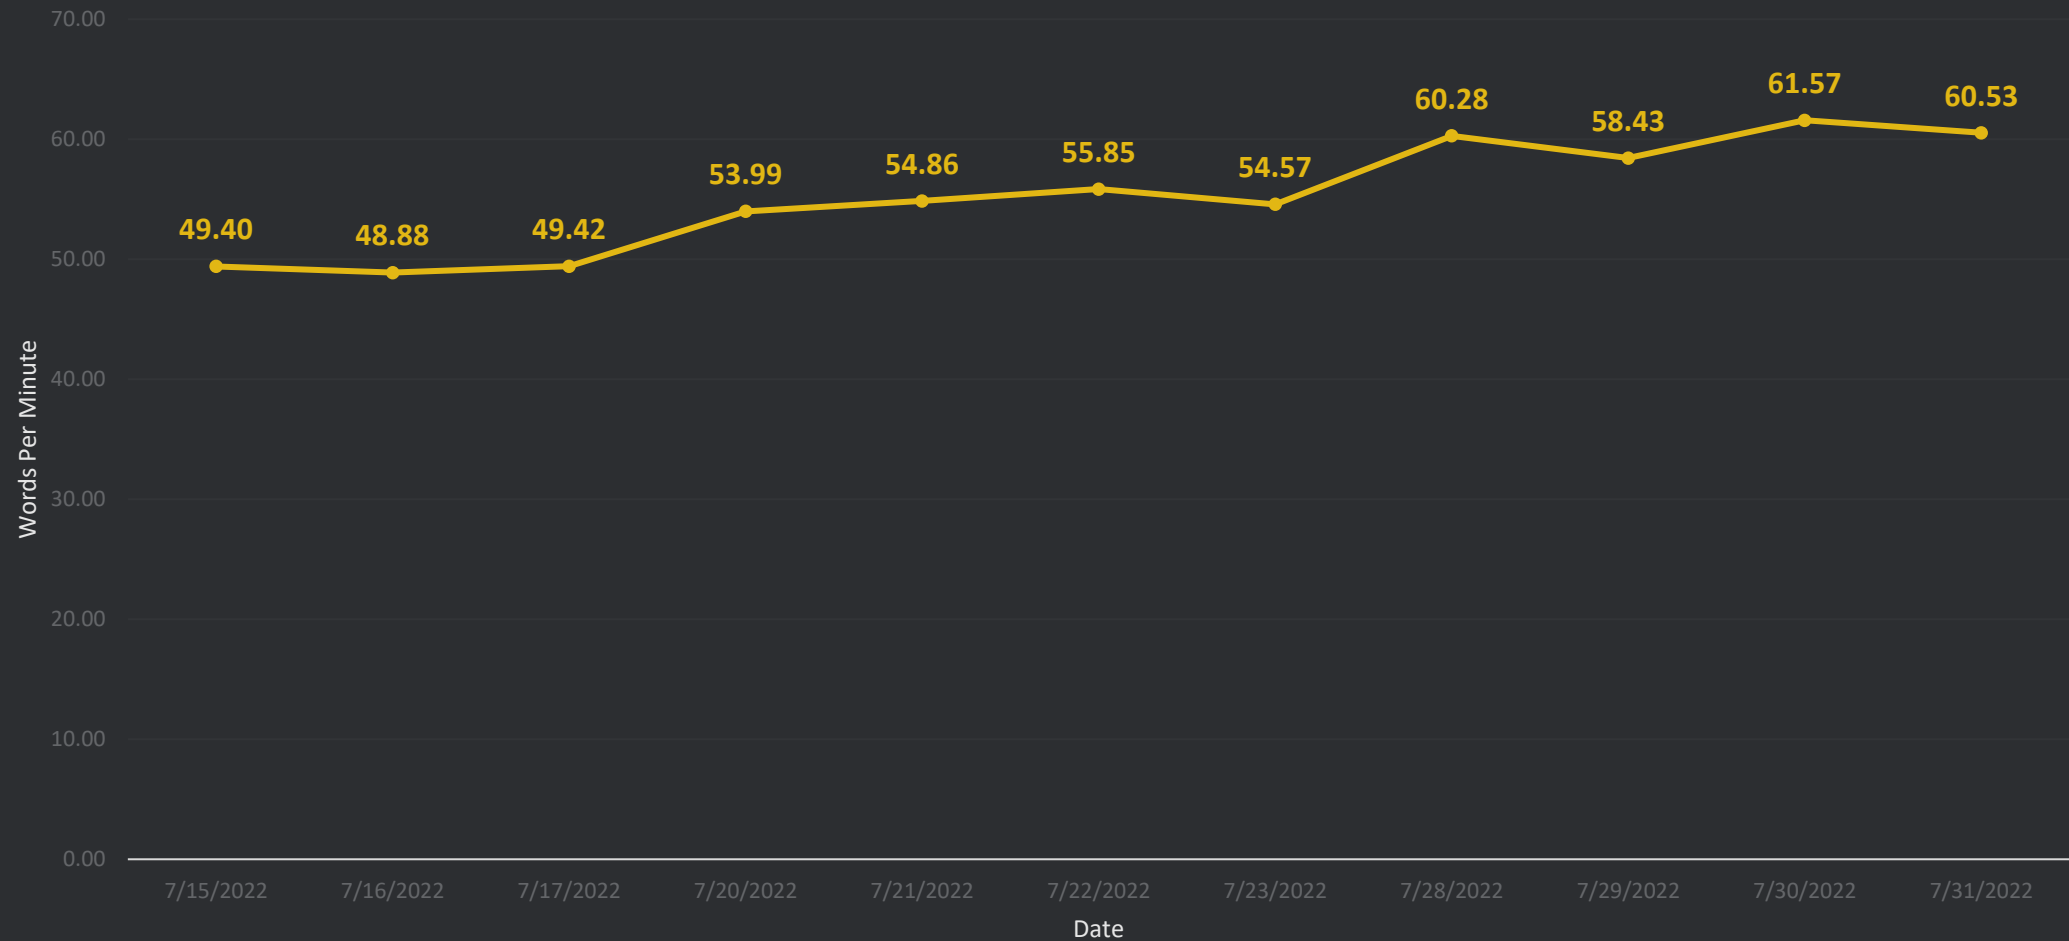

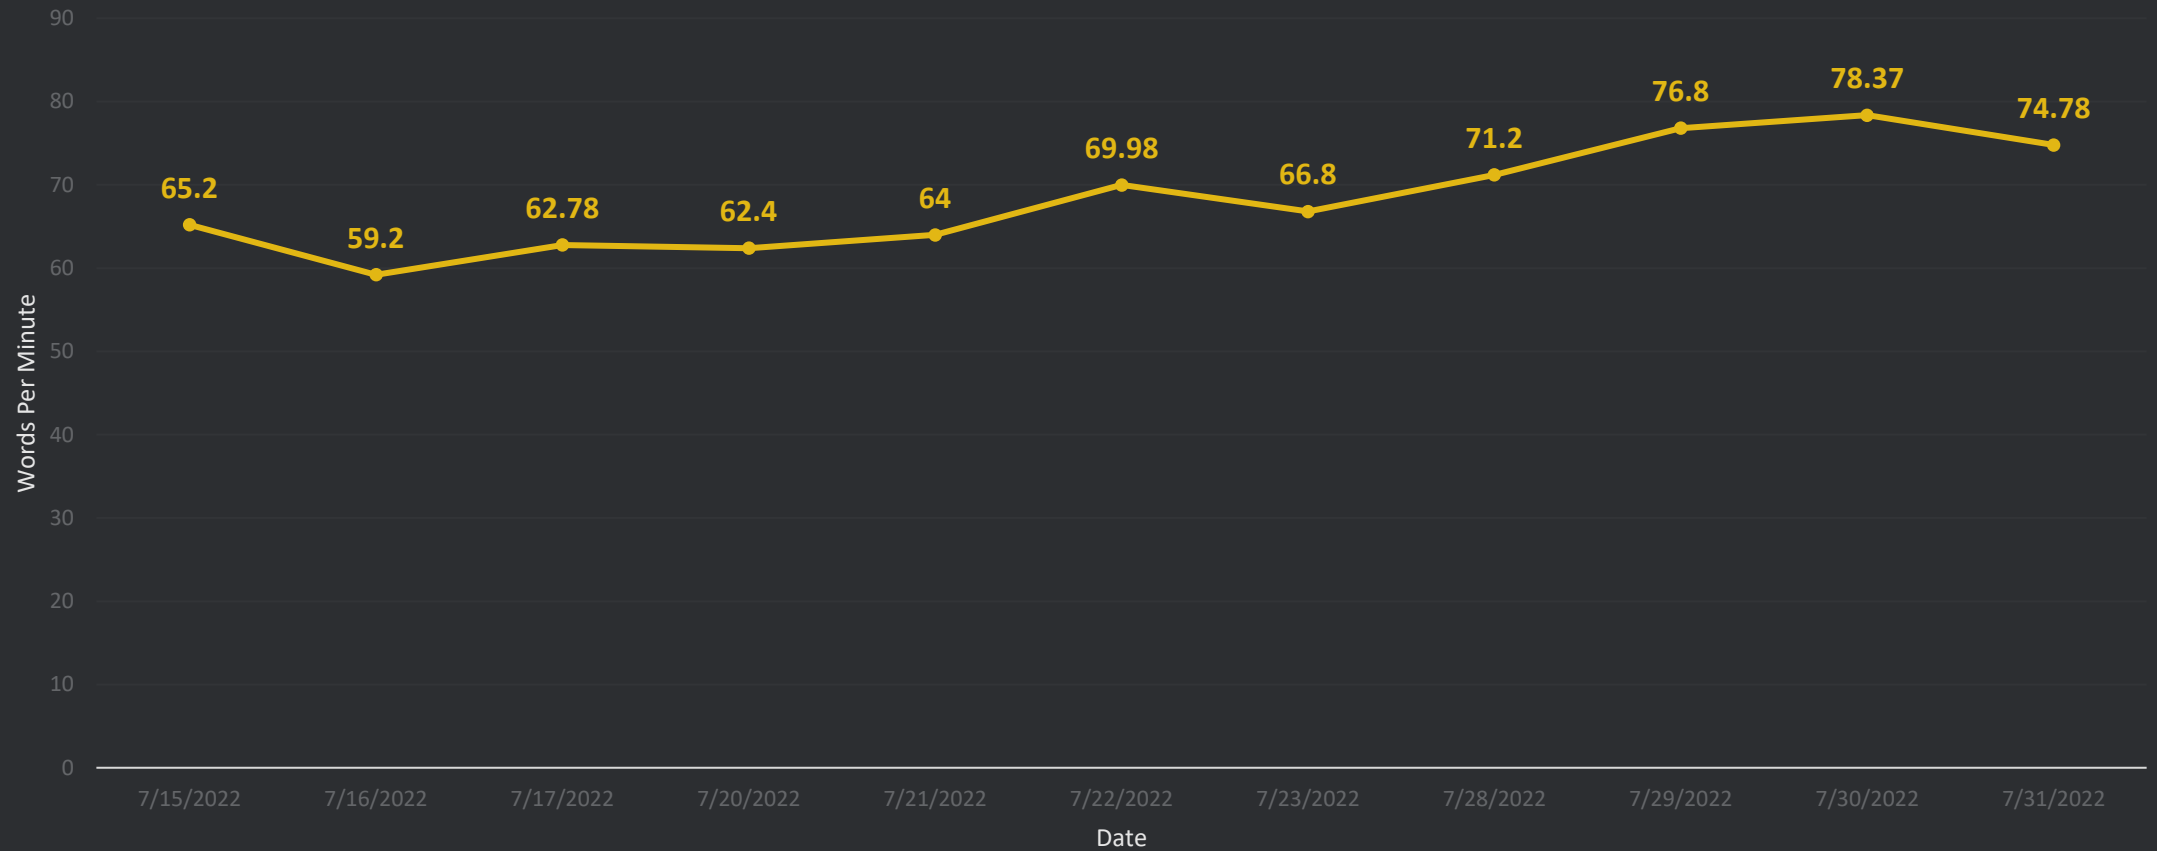

By: Rony Guerra

total tests per day

Overall, I completed a total of 860 tests in the "*Time 30 seconds*" mode over the span of 16 days. Clearly, I lost motivation during the second week as I did not complete any tests for four days. I wasn't consisted everyday, but I did practice more than an hour in some days.
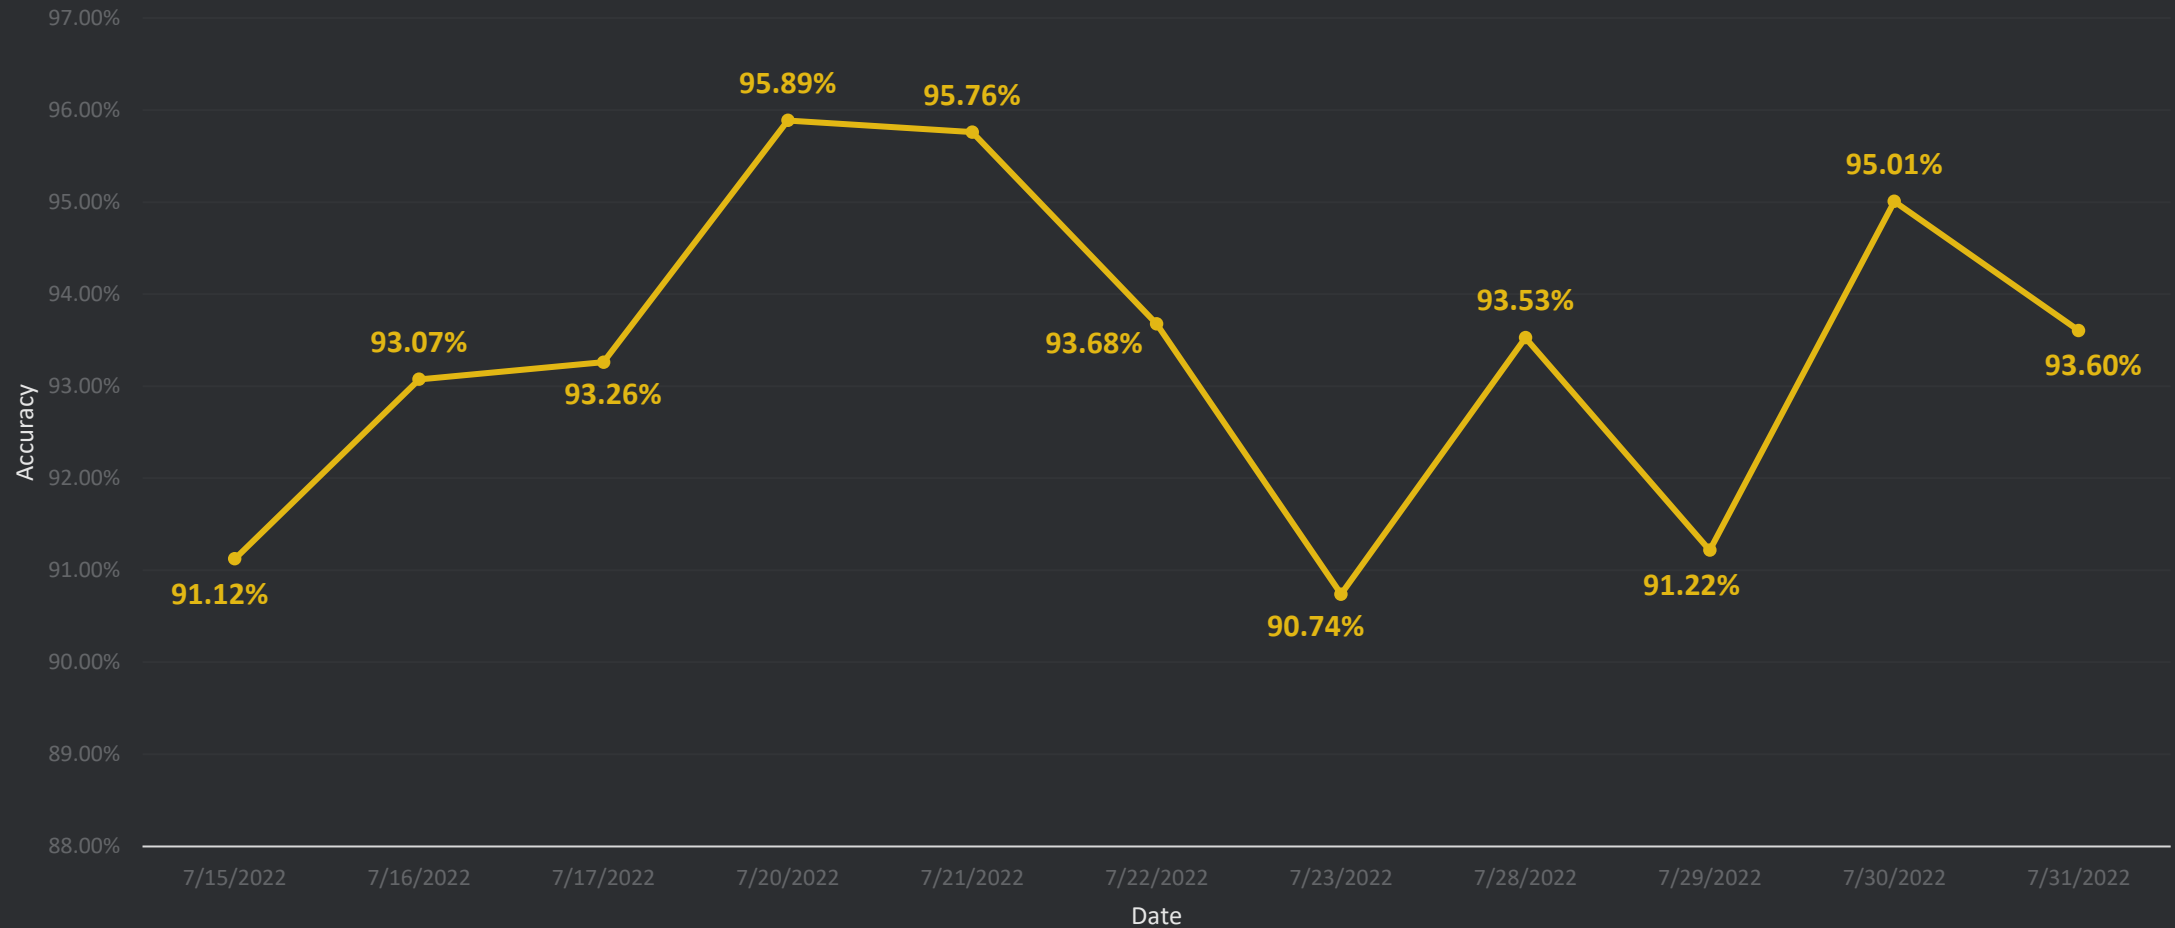

average words per minute per day

In result, I am satisfied with my progression as my average typing speed per day increased by +1.11 wpm.
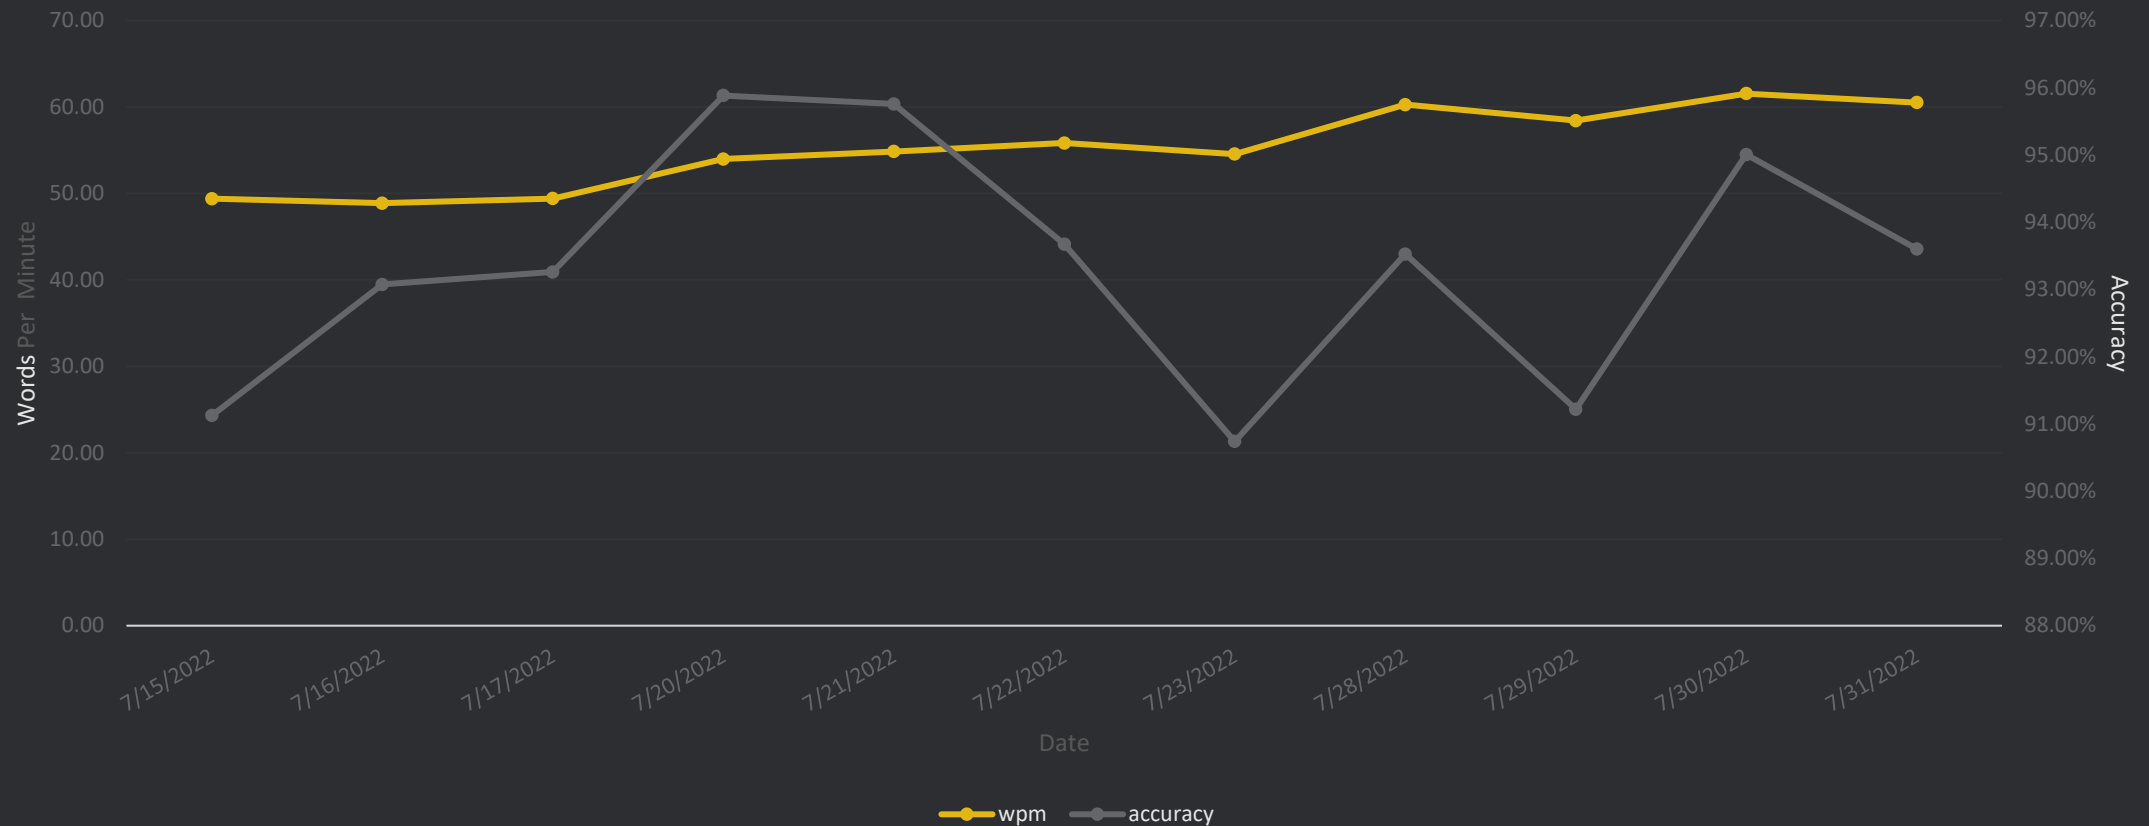

top speed words per minute per day

I was surprised that my maximum typing speed was 78 wpm. Towards the last couple days, I was consistently achieving 60 wpm for every tests.
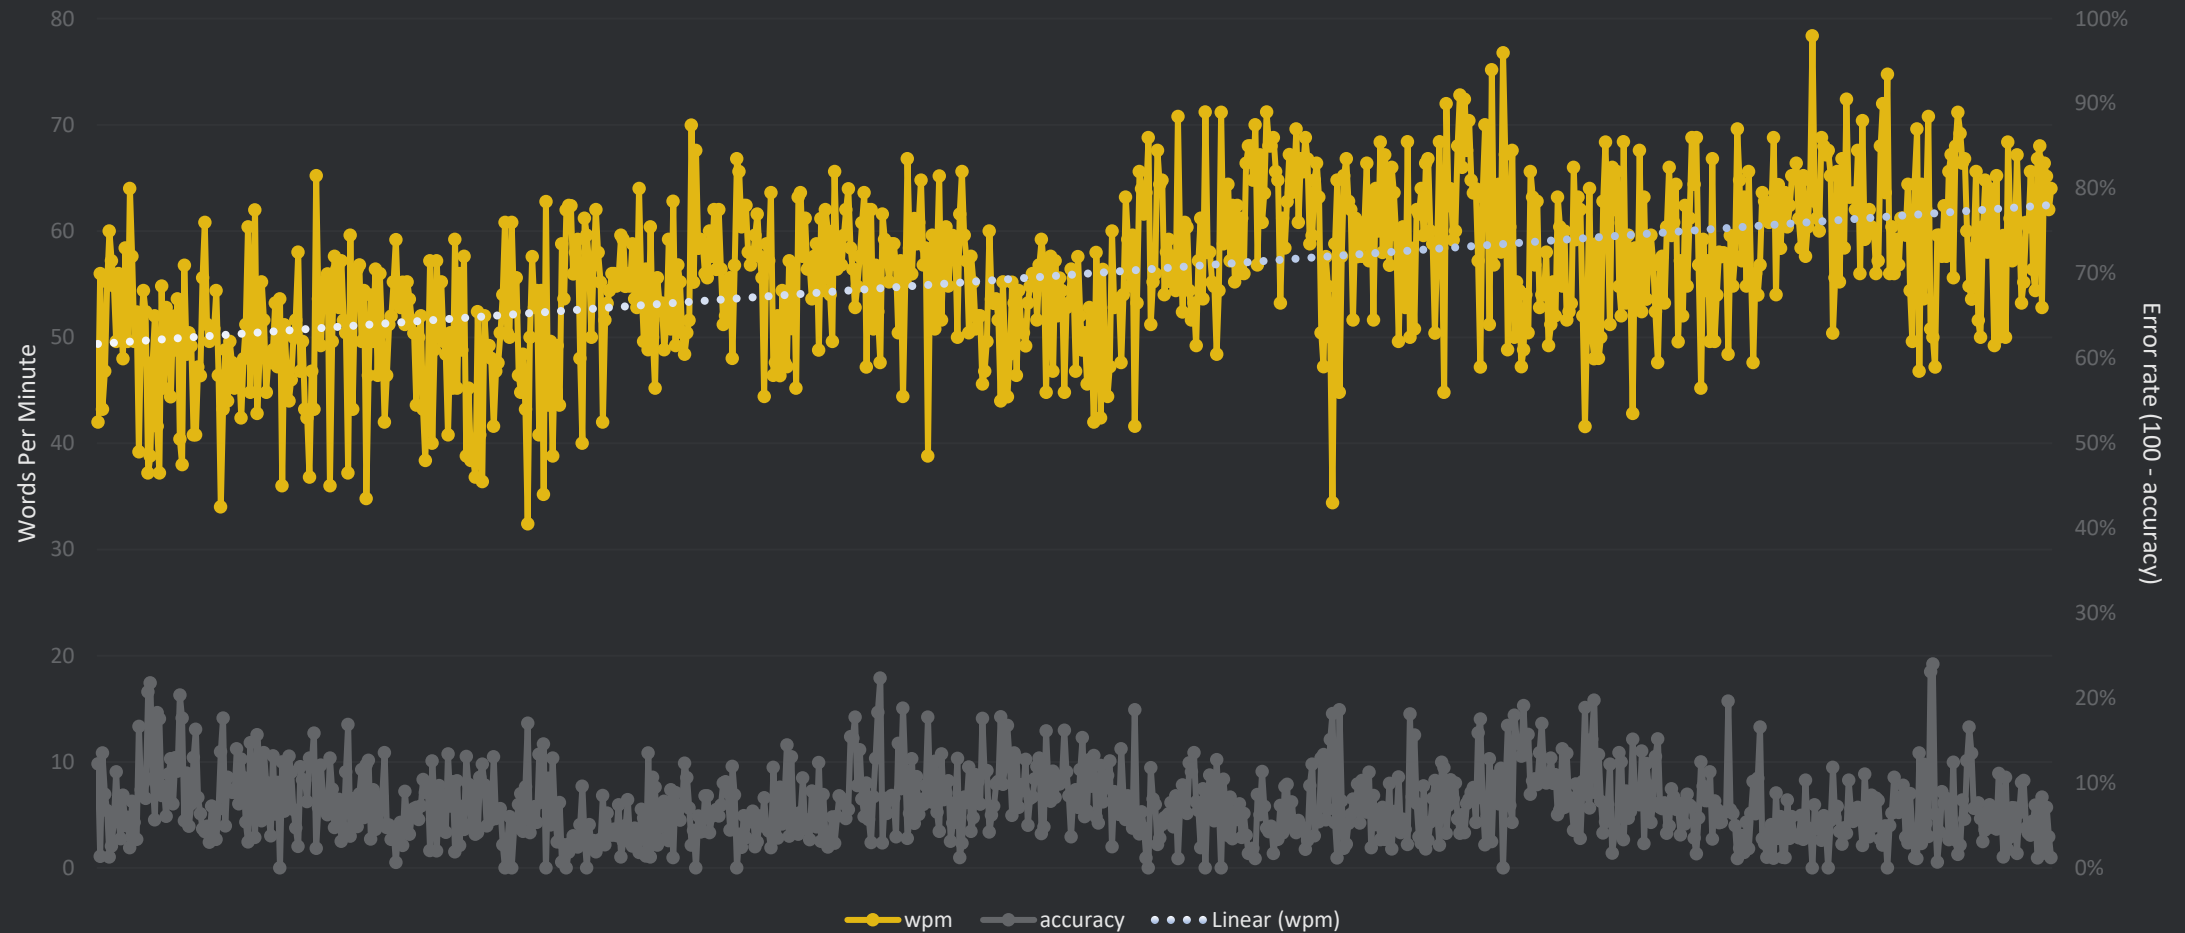

average accuracy per day

Overall, my average accuracy is 92.53%. According to Ratatype, the average accuracy for a typist is around 92%, meaning they make 8 mistakes for every 100 words typed. I will continue to practice on my accuracy until I achieve around 97% or higher in order to be considered a professional typist.

average words per minute/average accuracy per day

I gradually increased my words per minute, but my accuracy was in consisted. This is because I was mainly concerned on my typing speed rather than accuracy. Moving forward, I would focus on enhancing my accuracy.

daily progress from all tests

Overall, my average speed is 55.91 words per minute and my average accuracy is 92.53%. My desired result was to achieve 50 wpm and I surpassed it. I am thrilled with the results since I was able to go from 32 words per minute to 55 words per minute in a short period(78 wpm being my all-time top speed).

Conclusion

In conclusion, I am happy with the results since I improved my typing speed by a crazy amount. I am a much faster typist now compared to when I started learning how to touch type. Although my average typing accuracy is 92%, my accuracy has improved with the touch-typing method as I make less significant errors compared to when I was typing with my two index fingers. It is also easier to identify and correct your mistakes using this technique. More importantly, I will continue to practice using this technique because it was a lot of fun, and it has a lot of value by improving my typing speed.
